Deletion of Mirror Memory - Identifying Modification

86-151

MODEL Sedan Range 1994 MY

DATE 6/95

See VINs listed below

ISSUE:

The door mirror memory function was factory deleted on all 1994 model year Sedan Range vehicles as of VIN 701123 as described in Technical Bulletin 04-14 of 3/94. Approximately 500 Sedan Range vehicles from VIN 687219 to 701123 had the memory specification change performed in service.

On all vehicles, the seat memory remains fully functional. The mirror position memory and the passenger side door mirror dip function in reverse are the only functions deleted.

ACTION:

If the mirror positions are not retained in the memory function, check if the memory feature was deleted. Vehicles without the mirror memory function can be identified by checking near the Seat Control Module (SCM). An additional 48-pin connector with only 10 wires will be present. This additional connector has a shorting plug installed, Illustration 1.

NOTE: The deleted mirror memory function is the correct specification for the vehicle. Do not attempt to modify the system to allow mirror memory operation since the individual vehicle was not sold with this feature.

ILLUSTRATION 1

A Sedan Range vehicle without mirror memory will function as follows:

OPERATION	RESULT
Select driver mirror on switch pack	Driver's mirror switch enabled
Operate switch up/down	Driver's mirror moves up/down
Operate switch left/right	Driver's mirror moves left/right
